Content of the Examination

The Framing and Rough Carpentry (C-5) Examination is divided into four major sections:

1. Planning and Estimating (20%)
   - Project planning
   - Blueprints, specifications, and shop/field drawings
   - Estimating
   - Calculations

2. Structural Framing (37%)
   - Formwork
   - Load and span
   - Bracing
   - Shear and diaphragm
   - Structural hardware
   - Wood and metal framing

3. General Framing (21%)
   - Flashing and weatherproofing
   - Siding, roofing, and flooring
   - Doors, windows, and stairs
   - Fences, decks, porches, and gazebos
   - Squaring and leveling
   - Access and ventilation

4. Safety (22%)
   - Cal/OSHA requirements
   - EPA and AQMD regulations
   - Asbestos and environmental hazards
   - Transportation and traffic control

*Percentages are approximate*

Test Site Policy

This is a closed-book examination. No reference materials may be used during the examination. All materials brought to the examination site must be left in an unmonitored area at your own risk.

Test Strategy

This is a multiple-choice examination with four choices per question. Examination questions are written to provide only one BEST answer. Some questions require mathematical computation. A calculator will be provided.

There is no penalty for guessing. If you are unsure about a particular question, it is better to try to answer the question than to leave the question blank.

Plenty of time is provided to answer all examination questions, so be sure to read each question and its four choices completely and carefully before selecting the BEST possible answer to the question.
Sample Questions

Below are three typical examination questions. The correct answer is underlined.

1. If a quoted price for framing lumber is $800 per thousand board feet, what would be the cost of nine 2” x 8” x 10’ pieces and one 2” x 12” x 10’ piece?

   a. $97  
   b. $107  
   c. $112  
   d. $118  

2. In commercial framing, where is backing required?

   a. At fire walls  
   b. Behind grab bars  
   c. Behind ceiling joists  
   d. Around electrical outlets  

3. Three primary factors determine the size and the type of rafter to use in construction. Two of these are the distance spanned and the weight supported. What is the third factor?

   a. The spacing of the rafters  
   b. The spacing of joists  
   c. The type of sheeting to be used  
   d. The height of the wall

*All questions are written and reviewed by licensed contractors who are actively working in the trade*
