CONCRETE (C-8)

Content of the Examination
The Concrete (C-8) Examination is divided into five major sections:

1. Planning and Estimation (30%)
   - Planning concrete projects
   - Estimating concrete projects

2. Pre-placement Preparation (28%)
   - Demolition, grading, and excavating
   - Layout and forming
   - Installing drains and moisture barriers
   - Installing reinforcement and embedded items

3. Placing and Finishing (19%)
   - Placing concrete
   - Applying finishes
   - Curing and testing

4. Post-placement Tasks (5%)
   - Applying stains and sealers
   - Stripping forms; repairing, grouting, and caulking concrete

5. Safety (18%)
   - Employee safety
   - Job site safety

*Percentages are approximate*

Test Site Policy
This is a closed-book examination. No reference materials may be used during the examination. All materials brought to the examination site must be left in an unmonitored area at your own risk.

Test Strategy
This is a multiple-choice examination with four choices per question. Examination questions are written to provide only one BEST answer. Some questions require mathematical computation. A calculator will be provided.

There is no penalty for guessing. If you are unsure about a particular question, it is better to try to answer the question than to leave the question blank.

Plenty of time is provided to answer all examination questions, so be sure to read each question and its four choices completely and carefully before selecting the BEST possible answer to the question.
Sample Questions

Below are three typical examination questions. The correct answer is underlined.

1. How many cubic yards of concrete should a contractor order for a 20 ft. wide x 40 ft. long x 4 in. thick slab?
   a. 8
   b. 10
   c. 12
   d. 30

2. Where are spiral rebar ties used?
   a. In curved walls
   b. In grade beams
   c. In round columns
   d. In spiral staircases

3. If a contractor works added or bleed water into the surface during floating or troweling, what effect can this action have on the finished product?
   a. The surface can have map cracks or crazing.
   b. There can be a puddle or depressed area in the slab.
   c. The affected area can have a different texture from the rest of the slab.
   d. The porosity differential can be magnified to such a degree that it will limit the permeability of the slab.

*All questions are written and reviewed by licensed contractors who are actively working in the trade*
