

CONTRACTORS STATE LICENSE BOARD LICENSE EXAMINATION STUDY GUIDE

ELECTRICAL (C-10)

Content of the Examination

The Electrical (C-10) Examination is divided into five major sections:

1. Planning and Estimation (26%)

- Existing system evaluation
- Plan and specification interpretation
- Electrical calculations
- Code requirements
- Material selection
- Photovoltaic project planning

2. Rough Wiring (24%)

- System layout
- Clearance and accessibility requirements
- Raceway and panel installation
- Wire and equipment installation
- Grounding and bonding
- Photovoltaic rough wiring

3. Finish Wiring and Trim (11%)

- Finish device placement and installation
- Motor and equipment installation
- Wire and equipment labeling
- Trims and sealants
- Photovoltaic finish wiring

4. Startup, Troubleshooting and Maintenance (21%)

- System energizing and testing
- Common electrical problems
- Location, repair, and replacement of inoperable electrical wires/components
- Selection and use of electrical testing equipment
- Photovoltaic system performance

Percentages are approximate

5. Safety (18%)

- Lockout/tag out procedures
- Personal protective equipment (PPE)
- Tools/equipment
- Hazardous materials and job site environments

Percentages are approximate

Test Site Policy

This is a closed-book examination. No reference materials may be used during the examination. All materials brought to the examination site must be left in an unmonitored area at your own risk

Test Strategy

This is a multiple-choice examination with four choices per question. Examination questions are written to provide only one BEST answer. Some questions require mathematical computation. A calculator will be provided.

There is no penalty for guessing. If you are unsure about a particular question, it is better to try to answer the question than to leave the question blank.

Plenty of time is provided to answer all examination questions, so be sure to read each question and its four choices completely and carefully before selecting the BEST possible answer to the question.

Sample Questions

Below are three typical examination questions. The correct answer is underlined.

1. In Class 1, Division 2 locations, such as gas stations or refineries, what type of conduit should be used above ground?
 - a. Intermediate metal conduit or rigid conduit
 - b. Electrical metallic tubing
 - c. Electrical metallic tubing or flexible metallic tubing
 - d. Polyvinyl chloride conduit
2. Which of the following regulations applies to service-entrance conductors that are supplying service to a building or structure?
 - a. The conductors may not pass through the interior of another building or structure.
 - b. The conductors are permitted if the buildings or structures are close together.
 - c. The conductors are only permitted when approved construction drawings show the conductor routing.
 - d. The conductors are only permitted when service cannot be installed in any other way.
3. A contractor needs 13 receptacles that cost \$3.56 each plus sales tax of 7.25%. The supplier states that for every 10 receptacles that are purchased, the contractor will get one free of charge. What is the total cost of the receptacles?
 - a. \$42.02
 - b. \$42.72
 - c. \$45.82
 - d. \$49.66

All questions are written and reviewed by licensed contractors who are actively working in the trade
