HAZARDOUS SUBSTANCE REMOVAL

Content of the Examination

The Hazardous Substance Removal Examination is divided into four major sections:

1. Planning and Estimating (36%)
   - Planning hazardous substance projects
   - Estimating hazardous substance projects

2. Hazardous Substance Management (37%)
   - Identifying hazardous substances
   - Securing and controlling site access
   - Removing hazardous substances
   - Containing hazardous material migration
   - Installing and operating remediation systems
   - Determining proper waste disposal
   - Preparing and disposing of waste

3. Storage Tanks (9%)
   - Installing and upgrading storage tanks
   - Excavating for underground storage tanks
   - Removing and disposing of storage tanks
   - Closing/abandoning storage tanks

4. Safety (18%)
   - Job site safety
   - Personnel safety

*Percentages are approximate*

Test Site Policy

This is a closed-book examination. No reference materials may be used during the examination. All materials brought to the examination site must be left in an unmonitored area at your own risk.

Test Strategy

This is a multiple-choice examination with four choices per question. Examination questions are written to provide only one BEST answer. Some questions require mathematical computation. A calculator will be provided.

There is no penalty for guessing. If you are unsure about a particular question, it is better to try to answer the question than to leave the question blank.

Plenty of time is provided to answer all examination questions, so be sure to read each question and its four choices completely and carefully before selecting the BEST possible answer to the question.
**Sample Questions**

Below are three typical examination questions. The correct answer is underlined.

1. When using a crane to lift a 12,000-gallon tank out of the excavation, what is the preferable position of the rigging lines attached to the tank’s lifting eyes?

   a. One lifting line should be horizontal.
   b. The lifting lines should be as far apart as possible.
   c. The lifting lines should be as horizontal as possible.
   d. The lifting lines should be as vertical as possible.

2. To read and properly interpret laboratory analysis reports as they apply to hazardous sites, a contractor should have which of the following?

   a. The phone number of a contact at the lead agency
   b. Basic knowledge of math
   c. A contact at Cal/OSHA
   d. Basic knowledge of chemistry and the measurements used

3. How much material will it take to fill up three round holes drilled into the ground 25 feet deep and 2 feet in diameter?

   a. 235.5 cubic feet
   b. 180.5 cubic feet
   c. 150.2 cubic feet
   d. 100.7 cubic feet

*All questions are written and reviewed by licensed contractors who are actively working in the trade*
