   - Select level of finish
   - Prepare and tape surfaces
   - Finish and coat surfaces
   - Sand and/or sponge wallboard
   - Texture surfaces

5. Safety (17%)
   - Personnel safety procedures
   - Job site safety procedures
   - Operate tools and equipment
   - Work at elevated heights

*Percentages are approximate*

Test Policy

This is a closed-book examination. No reference materials may be used during the examination.

Test Strategy

This is a multiple-choice examination with four choices per question. Examination questions are written to provide only one BEST answer. Some questions require mathematical computation. A calculator will be provided.

There is no penalty for guessing. If you are unsure about a particular question, it is better to try to answer the question than to leave the question blank.

Plenty of time is provided to answer all examination questions, so be sure to read each question and its four choices completely and carefully before selecting the BEST possible answer to the question.
Sample Questions

Below are three typical examination questions. The correct answer is marked with an asterisk (*).

1. Which of the following is the MOST likely to cause high joints?
   
   a. There is high humidity.
   b. There is low humidity.
   c. The mud is too thin.
   d. The mud is too thick.*

2. How many total square feet of wallboard are needed to cover each side of a wall that is 26 feet long and 14 feet high?
   
   a. 364 square feet
   b. 546 square feet
   c. 728 square feet*
   d. 736 square feet

3. What should be done when there is a break or change of elevation of 18" or more in a hallway floor?
   
   a. Postpone work until the stairway is constructed.
   b. Provide a warning sign at least 8" x 10".
   c. Provide a ladder, ramp, or temporary stairs.*
   d. Provide caution tape barriers.

*All questions are written and reviewed by licensed contractors who are actively working in the trade*
